SCHOOL OF ECONOMICS

Established in 1990

The School of Economics provides high-quality programs of study leading to a Bachelor of Science in economics or a minor or certificate in economics for students in other disciplines. The school also participates in the International Plan (http://www.internationalplan.gatech.edu) and the Research Option (http://www.undergradresearch.gatech.edu/research-option) for undergraduate students. The program focuses on skills and knowledge critical for a life of learning and leads to careers in academics, management, banking, the public sector, and other professional fields. A degree in economics is especially appropriate for students intending to pursue advanced degrees in the social sciences and in professional schools of management, law, and public administration.

Modern economics is analytically rigorous, requiring a background in mathematics and statistics. At the same time, it is critically linked with the other social sciences and humanities, as well as to applied management and policy studies. The undergraduate curriculum provides a strong, in-depth understanding of economic thought and policy and is intended to prepare students for productive careers, for useful roles in society, and for satisfying personal lives in a technologically complex, culturally diverse world.

The School of Economics offers

- a Bachelor of Science in Global Economics and Modern Languages in cooperation with the School of Modern Languages and
- a Bachelor of Science in Economics and International Affairs in cooperation with the Sam Nunn School of International Affairs.
- a Bachelor of Science in Global Economics and Modern Languages in cooperation with the School of Modern Languages.

These programs provide students an opportunity to broaden their educational experience and to enhance their marketability in these areas.

The School of Economics also offers graduate courses leading to a Master of Science in Economics degree and in support of PhD programs in management, public policy, industrial and systems engineering, and city and regional planning.

Minors

- Minor in Economics (http://www.catalog.gatech.edu/programs/ minor-economics)
- Minor in Health, Medicine, and Society (http://www.catalog.gatech.edu/programs/minor-health-medicine-society)

Bachelor’s Degrees

- Bachelor of Science in Economics (http://www.catalog.gatech.edu/programs/economics-bs)
- Bachelor of Science in Economics and International Affairs (http://www.catalog.gatech.edu/programs/economics-international-affairs-bs)
- Bachelor of Science in Global Economics and Modern Languages (http://www.catalog.gatech.edu/programs/global-economics-modern-languages-bs)

Master’s Degree

- Master of Science in Economics (http://www.catalog.gatech.edu/programs/economics-ms)

Doctoral Degree

- Doctor of Philosophy with a Major in Economics (http://www.catalog.gatech.edu/programs/economics-phd)

ECON 1001. Ecomics at Work. 1 Credit Hour.
Students are introduced to career opportunities in economics and explore/identify how economics is used in different employment contexts.

ECON 1XXX. Economics Elective. 1-21 Credit Hours.

ECON 2100. Economic Analysis and Policy Problems. 3 Credit Hours.
Practice in analysis of decision problems of relevance to students in public policy and personal decision areas. Issues relating to individual decisions to produce, consume, invest, and trade will be explored. Analytical approaches will enable students to use and incorporate basic elements of micro- and macro-economic analysis and to appreciate issues regarding testing and measurements. Students can receive credit for either ECON 2100 or ECON 2101, or for ECON 2105/2106. Students cannot receive credit for both ECON 2100 and ECON 2101 or for ECON 2105/2106. Students cannot receive credit for ECON 2100 and ECON 2101 or for ECON 2105/2106 or for ECON 2101 and ECON 2105/2106.

ECON 2101. The Global Economy. 3 Credit Hours.
Historical and theoretical understanding of global economy, including international trade, finance, investment production; regional economic integration; economic development; environment, using micro and macro economic principles. Students can receive credit for either ECON 2100 or ECON 2101, or for ECON 2105/2106. Students cannot receive credit for either ECON 2100 and ECON 2101 or for ECON 2105/2106. Students cannot receive credit for ECON 2100 and ECON 2101 or for ECON 2105/2106 or for ECON 2101 and ECON 2105/2106.

ECON 2105. Principles of Macroeconomics. 3 Credit Hours.
This principles of economics course is intended to introduce students to concepts that will enable them to understand and analyze economic aggregates and evaluate economic policies. Students can receive credit for either ECON 2100 or ECON 2101, or for ECON 2105/2106. Students cannot receive credit for either ECON 2100 or ECON 2101, or for ECON 2105/2106. Students cannot receive credit for ECON 2100 and ECON 2101 or for ECON 2100 and ECON 2105/2106 or for ECON 2101 and ECON 2105/2106.

ECON 2106. Principles of Microeconomics. 3 Credit Hours.
This principles of economics course is intended to introduce students to concepts that will enable them to understand and analyze structure and performance of the market economy. Students can receive credit for either ECON 2100 or ECON 2101, or for ECON 2105/2106. Students cannot receive credit for either ECON 2100 and ECON 2101, or for ECON 2100 and ECON 2105/2106 or for ECON 2101 and ECON 2105/2106.

ECON 2250. Statistics for Economists. 3 Credit Hours.
This course provides an introduction to probability theory and statistical inference. Students will explore tools and concepts relevant to the study of economics and gain a familiarity with statistical software widely used by economists.

ECON 2698. Undergraduate Research Assistantship. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty member.

ECON 2699. Undergraduate Research. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty member.
ECON 2803. Special Topics. 3 Credit Hours.
Special topic offerings of current interest not included in permanent courses.

ECON 2XXX. Economics Elective. 1-21 Credit Hours.

ECON 3110. Advanced Microeconomic Analysis. 3 Credit Hours.
Review of important mathematical tools and techniques used in advanced microeconomics. Advanced topics include the estimation of demand and cost functions; the role of government in the economy (externalities, property rights, and public goods); public choice theory; factor markets (especially labor and capital markets); models of monopoly; pricing techniques used by firms with market power (monopolies and oligopolies); and game theory.

ECON 3120. Advanced Macroeconomic Analysis. 3 Credit Hours.
Integrates issues arising from international economic relationships with the macroeconomic dynamics of domestic economies. Income determination in the open economy and the effect of stabilization policies on the international monetary system.

ECON 3150. Economic and Financial Modeling. 3 Credit Hours.
The course develops student ability to model the essential elements of the investment decision through use of a valuation model and spreadsheet analysis. Expands upon basic knowledge of present value analysis to recognize risk, growth, capital markets, and market valuation of ongoing operations.

ECON 3160. Introduction to Empirical Economics: Data Visualization, Analysis, and Presentation. 3 Credit Hours.
Develops student abilities to logically formulate economic issues; identify and collect data from traditional and Internet sources; analyze data using spreadsheet and presentation software; generate sound and defensible conclusions and recommendations; and make effective presentations of analysis and conclusions.

ECON 3161. Econometric Analysis. 3 Credit Hours.
Econometric techniques and applications in economic and business analysis. Practical issues involving modeling, estimation, hypothesis testing, and emphasizing computer implementation through econometric software.

ECON 3300. Economics of International Energy Markets. 3 Credit Hours.
Economics of international energy markets and how business and government policy decisions are made. Economic models, and financial, institutional and regulatory aspects of energy markets.

ECON 3XXX. Economics Elective. 1-21 Credit Hours.

ECON 4060. Money and Capital Markets. 3 Credit Hours.
An examination of the role of money in the exchange process, the Federal Reserve's monetary policy strategy, and the impact of monetary policy on financial markets and aggregate economic activity.

ECON 4160. Economic Forecasting. 3 Credit Hours.
An introduction to widely used economic and business forecasting methods, emphasizing quantitative approaches and computer implementation through time-series econometric software.

ECON 4170. Mathematics for Economic Modeling. 3 Credit Hours.
The application of mathematical tools to economic analysis. Topics include static analysis, comparative-static analysis, optimization, and dynamic analysis.

ECON 4180. Game Theory for Economics. 3 Credit Hours.
Course covers static games of complete information, dynamic games of complete information, static games of incomplete information and dynamic games of incomplete information.

ECON 4232. Labor Economics. 3 Credit Hours.
Provides an introduction to the theory and practice of contemporary labor economics. The aim is to understand the forces that influence behavior in the labor market.

ECON 4301. Economics of Information, Transactions Costs, and Contracts. 3 Credit Hours.
Develops from analysis of the individual in a trading or transaction situation to study organizations as groups of affiliated individuals. Assesses the situations when organizations are preferable to markets as forms of organizing economic and social activity. Institutional economics and transaction cost economics are studied. Analysis of corporate restructuring and privatization.

ECON 4311. Strategic Economics for Global Enterprise. 3 Credit Hours.
This introductory course on the multinational enterprise (MNE) will examine from an economic and interdisciplinary perspective the challenges facing MNE's in a fast-changing international business environment. The emphasis will be on the use of economic tools to analyze issues and understand their managerial implications.

ECON 4321. Economics of Technology, Innovation, and Entrepreneurship. 3 Credit Hours.
Analysis of level and type of entrepreneurial activity. Study of business and economic history, legal, and institutional arrangements.

ECON 4340. Economics of Industrial Competition. 3 Credit Hours.
This course examines the theory of the firm, the relationship between market structure, practices, and performance, and the determinants of technological change. The role (and ability) of government policy to solve various market failures, via antitrust enforcement, regulation, etc., is also discussed.

ECON 4345. Economic Regulation. 3 Credit Hours.
This course examines how government economically regulates private industry, how it might regulate more efficiently, and when it should not regulate at all. General theories of antitrust enforcement and economic regulation are developed and applied to a variety of industry cases.

ECON 4350. International Economics. 3 Credit Hours.
This is an introductory course in international economics and will cover important topics in trade theory, trade policy, and international finance. The emphasis will be on using economic tools to analyze a variety of current events in the world economy.

ECON 4351. International Financial Economics. 3 Credit Hours.
This course familiarizes students with concepts, models, theories and applications in international markets.

ECON 4355. Global Financial Economics. 3 Credit Hours.
Examines the system of markets and institutions for exchange of capital, money, and goods, in the global marketplace; impact on national economics and fundamental economic global relationships.

ECON 4357. Law and Economics of the Global Trading System. 3 Credit Hours.
This introductory course on the multinational enterprise (MNE) will examine from an economic and interdisciplinary perspective the challenges facing MNE's in a fast-changing international business environment. The emphasis will be on the use of economic tools to analyze issues and understand their managerial implications.

ECON 4360. Network Economics. 3 Credit Hours.
This course will examine alternative network architectures (e.g. simple ring networks, two star networks connected by a trunk line), explore how differences in a network’s economic characteristics have different market structure implications and accordingly, lead to alternative public policy stances.

ECON 4370. Law and Economics. 3 Credit Hours.
To introduce students to economic aspects of legal decision-making and to develop students' ability to critically analyze the purposes and efficiency of legal decision-making from an economic perspective.
ECON 4411. Economic Development. 3 Credit Hours.
Concepts and studies of developing economies. Selected topics include development experience and theories, growth, agriculture, urbanization, industrialization, and links between trade policy and development.

ECON 4412. Cost-Benefit Analysis. 3 Credit Hours.
This course will acquaint the student with the principles, tools, issues, strengths, and limitations of cost-benefit analysis (CBA); to prepare the student to competently review, criticize, and use CBA studies; and to enable the student to carry out limited CBA studies.

ECON 4415. Conflict and Security in Developing Countries. 3 Credit Hours.
This course engages undergraduate students in the analysis of multiple dimensions of contemporary civil conflict and serves as an introduction to economic studies of terrorism.

ECON 4421. Urban and Regional Economics. 3 Credit Hours.
Economics of regions, cities, and space. Theories of growth and location, effects of urbanization, agglomeration, and congestion. Public policy relating to urban and regional problems.

ECON 4430. Economics of Transportation and Communication Systems. 3 Credit Hours.
Economic analysis for the design, operation, and management of transportation and communication systems. Study of systems analysis and modeling. Application to industry and study of industrial change and dynamics. Special attention to corporate restructuring and industrial consolidation and merger.

ECON 4440. Economics of Natural Resources and the Environment. 3 Credit Hours.
This course covers three aspects of environmental economics. First, it considers policy interventions appropriate to problems involving environmental externalities. Second, it explains methods used to estimate economic values for environmental goods. Finally, it explains the economics of depletable and renewable resources.

ECON 4450. Topics in African American Entrepreneurship. 3 Credit Hours.

ECON 4460. Public Economics. 3 Credit Hours.
This course focuses on public goods, how public decisions regarding public goods are made, the “free-rider” problem, voting and taxation principles, welfare, the Tiebout Hypothesis, budgeting, and fiscal policies.

ECON 4510. Economics of Health and Health Care. 3 Credit Hours.
This course surveys the theoretical and empirical evidence regarding current issues in health and health care. Individual-level models of health behaviors and the demand for health and medical insurance are presented. The economic behaviors of physicians, hospitals, and insurance companies are also characterized. The possible role of government in encouraging the equitable and efficient performance of health markets is discussed with a particular emphasis on current debates involving individual health decisions, health care reform, and the diffusion of new medical technologies.

ECON 4520. Economics of Sports. 3 Credit Hours.
Economic tools will be used to assess the role sports plays in our society.

ECON 4610. Seminar in Economic Policy. 3 Credit Hours.
The objective of the course is to enable students to interpret current economic problems and policies using the economic models learned in their theory courses. Students study the current “Economic Report of the President” and apply analytical tools to the data included in the text. Each student selects a current issue for detailed examination and report.

ECON 4620. History of Economic Thought. 3 Credit Hours.
This course is concerned with the economists who interpreted and influenced the development of capitalism and socialism over the last two centuries.

ECON 4698. Undergraduate Research Assistantship. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty member.

ECON 4699. Undergraduate Research. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty member.

ECON 4740. Seminar in Political Economy. 3 Credit Hours.
Capstone experience in which students apply the tools of political economy to international issues. Crosslisted with INTA 4740.

ECON 4741. Thesis in Political Economy. 3 Credit Hours.
Individual project applying the tools of political economy to international issues. Crosslisted with INTA 4741.

ECON 4803. Special Topics in Economics. 3 Credit Hours.
Courses designed to permit students and a professor to pursue a specialized interest in an area of economics not extensively treated in the offerings of the School.

ECON 4811. Special Topics in Economics. 1 Credit Hour.
Courses designed to permit students and a professor to pursue a specialized interest in an area of economics not extensively treated in the offerings of the School.

ECON 4812. Special Topics in Economics. 2 Credit Hours.
Courses designed to permit students and a professor to pursue a specialized interest in an area of economics not extensively treated in the offerings of the School.

ECON 4813. Special Topics in Economics. 3 Credit Hours.
Courses designed to permit students and a professor to pursue a specialized interest in an area of economics not extensively treated in the offerings of the School.

ECON 4814. Special Topics in Economics. 4 Credit Hours.
Courses designed to permit students and a professor to pursue a specialized interest in an area of economics not extensively treated in the offerings of the School.

ECON 4815. Special Topics in Economics. 5 Credit Hours.
Courses designed to permit students and a professor to pursue a specialized interest in an area of economics not extensively treated in the offerings of the School.

ECON 4901. Individual Research in Economics. 1-21 Credit Hours.
Designed to permit independent study with a faculty member.

ECON 4910. Individual Research in Economics. 3 Credit Hours.
Course related to independent student research. Topics determined by instructor and student.

ECON 4990. Georgia Internship Program. 1-21 Credit Hours.
Course projects related to professional internships. Topics and requirements to be arranged by student, instructor, and sponsor.

ECON 4XXX. Economics Elective. 1-21 Credit Hours.

ECON 6100. Economic Analysis for Managers. 3 Credit Hours.
A survey of microeconomic and macroeconomic concepts essential to the academic preparation of prospective managers. Economic theory used as a framework for contemporary managerial decision making.

ECON 6105. Macroeconomics. 3 Credit Hours.
Macroeconomic theory, including determination of national income, employment, the general price level, and potential for economic growth. Sources of macroeconomic instability and stabilization policies.
ECON 6106. Microeconomic Analysis. 3 Credit Hours.
Microeconomics, resource allocation decisions of households, businesses, and government agencies. Enables the student to understand and apply economic principles to consumer, business, and government decisions.

ECON 6110. Economics of Corporate Strategy. 3 Credit Hours.
Applies microeconomic and macroeconomic theory to the development of modern corporate strategy, including organizational boundaries, market structure and competition, industry analysis, and competitive advantage.

ECON 6121. Research Methods. 3 Credit Hours.
Introduces students to issues related to conducting research in economics. Topics include the derivation of empirical models from theoretical constructs, causality, experimental and non-experimental data, hypothesis testing, and policy analysis. Students also become familiar with electronic data sources and retrieval and are introduced to several professional software packages.

ECON 6130. Quantitative Methods in Economics. 3 Credit Hours.
This course covers fundamental quantitative tools used in economic and econometric analysis, which includes topics in differential calculus, optimization, and linear algebra.

ECON 6140. Probability and Statistics. 3 Credit Hours.
This course gives students the necessary background for taking courses in the econometrics sequence. Topics include descriptive statistics, continuous and discrete probability distributions, parameter estimation, one- and two-sample hypothesis testing, and bivariate regression models.

ECON 6150. Cost-Benefit Analysis. 3 Credit Hours.
The application of economic, financial, and quantitative reasoning and tools to issues of resource allocation and policy, primarily in the public sector.

ECON 6160. Econometric Analysis. 3 Credit Hours.
This course introduces advanced econometric methods on estimation and testing, including instrumental variable estimation, panel data analysis, limited dependent variable models, and simultaneous equation system. The course emphasizes applications of these techniques to real-world problems using professional software packages.

ECON 6161. Econometric Modeling and Forecasting. 3 Credit Hours.
This course introduces techniques on economic and business forecasting, focusing on regression analysis and ARIMA models. Testing for unit roots and cointegration are also discussed. Professional software packages for forecasting are used in applications.

ECON 6162. Discrete Choice Econometrics. 3 Credit Hours.
Focuses on econometric methods for which the dependent variable represents an "either-or" choice. Included in the set of topics are binary and multinomial logit, ordered choice, heteroskedastic extreme value, bivariate and multivariate probit, nested logit structures, discrete/continuous, and Poisson models. The course includes numerous applications using professional software programs.

ECON 6200. Money and Capital Markets. 3 Credit Hours.
The role of money in the exchange process, Federal Reserve strategy, and the impact of monetary policy on financial markets and aggregate economic activity.

ECON 6310. Public Economics. 3 Credit Hours.
An examination of public goods, public decision making, voting, free riders, taxation principles, welfare, the Tiebout Hypothesis, budgeting, and fiscal policy.

ECON 6330. Urban and Regional Economics. 3 Credit Hours.
Economics of regions, cities, and space. Theories of growth and location, effects of urbanization, agglomeration, and congestion. Public policy relating to urban and regional problems.

ECON 6341. Transportation Economics. 3 Credit Hours.
Examines the economics of transportation markets, including resource allocation, economic welfare, government regulation, and public policy. Using an econometric case study approach, the course develops the necessary steps for testing hypotheses, analyzing the finding of recent studies, and exploring implications for the development and implementation of transportation policy.

ECON 6360. Development Economics. 3 Credit Hours.
Concepts and models of development and growth in Third World countries, emphasizing modeling and testing of recent changes in the Third World. Topics include economic growth, trade and globalization, poverty and inequity, migration, population growth, unemployment, agricultural development, the environment, and the role of the market versus the state.

ECON 6380. Economics of Natural Resources and the Environment. 3 Credit Hours.
Examines the management of natural resources and the environment from an economic perspective. Topics include resource valuation methods, optimal resource management, regulation of pollution and sustainable development. Issues are studied through economic models and empirical testing.

ECON 6410. Industrial Organization. 3 Credit Hours.
This course explores the impact that innovation, technology progress, and R&D activities have upon a firm's pricing and output behavior. Based upon computer case studies, biotechnology, and telecommunications sectors, the course further analyzes the economic role that firm size and entrepreneurial opportunities play in technological development and innovation.

ECON 6440. The Economics of Technology, Innovation, and Entrepreneurship. 3 Credit Hours.
This course uses economic tools to examine strategic aspects of competition and collaboration in an integrated global market. Topics include the determinants and changes in the boundaries of global firms, competitive advantage and value creation, the nature of global markets, and strategic positioning in the global market place.

ECON 6450. Topics in African American Entrepreneurship. 3 Credit Hours.
Explores African-American entrepreneurship from the ante-bellum period to the present. Implications of economic and socio-political developments are given particular attention, including the urbanization of blacks, the rise of benevolent societies following slavery, institutionalization of Jim Crow segregation, desegregation, and affirmative action's role in an emerging class of black entrepreneurs.

ECON 6460. Industrial Organization. 3 Credit Hours.
This course examines modern theories of the firm, market power, and competitive strategy. Game theory is employed throughout the course.

ECON 6510. Economics of Health and Health Care. 3 Credit Hours.
A critical survey of the current theoretical and empirical issues involving the economics of health and health care.

ECON 6610. Seminar in Economic Policy. 3 Credit Hours.
Interprets current economic problems and policies using fundamental economic principles.

ECON 6620. History of Economic Thought. 3 Credit Hours.
Economists who interpreted and influenced the development of capitalism and socialism over the last two centuries.
ECON 6650. International Economics and Policy Analysis. 3 Credit Hours.
Explores international economic issues. The first part examines aspects of international trade, including specialization and exchange, strategy, labor and capital movements, preferential trading arrangements, and economic development. The second part analyzes international finance, including exchange rates, open economy macro policies, Eurocurrency markets, and the international monetary system.

ECON 6XXX. Economics Elective. 1-21 Credit Hours.

ECON 7000. Master's Thesis. 1-21 Credit Hours.

ECON 7004. Mathematics for Economists. 3 Credit Hours.
Topics include matrix algebra, limits and open sets, implicit functions and their derivatives, quadratic forms and definite matrices, unconstrained and constrained static optimization, dynamic optimization and economic applications.

ECON 7012. Microeconomic Theory I. 3 Credit Hours.
The topics covered in this course are axiomatic theory of consumer behavior, consumer choice, classical demand theory, aggregate demand, choice under uncertainty, producer theory and partial equilibrium analysis.

ECON 7013. Microeconomic Theory II. 3 Credit Hours.
The subject areas in this course are general equilibrium, welfare economics, externalities, public goods, economics of information and inter-temporal dynamic analysis.

ECON 7015. Game Theory. 3 Credit Hours.
Static and dynamic games of complete and incomplete information, and mechanism design. Economic applications include Cournot, Bertrand and Stackelberg duopolies, voluntary provision of public goods, auctions, procurement contracts and time inconsistency issues.

ECON 7022. Econometrics I. 3 Credit Hours.
This course is a comprehensive introduction to mathematical statistics principles underlying statistical analyses in economics. It covers probability theory, expectation, sampling, asymptotic results, the main families of probability distributions studied in economics, estimation and hypothesis testing.

ECON 7023. Econometrics II. 3 Credit Hours.
Linear and nonlinear regression analyses, hypothesis testing, ordinary and generalized least squares, instrumental variables estimation, the generalized method of moments, the method of maximum likelihood, methods for stationary time series, unit roots and cointegration, and specification testing.

ECON 7025. Empirical Research Methods. 3 Credit Hours.
Topics include up-to-date theory for data analysis, including time series, cross section and panel, and empirical applications using panel data, time series data and cross-sectional data.

ECON 7026. Microeconomet Analysis. 3 Credit Hours.
Focus on empirical microeconometric methods, including binary, multinomial, and ordered response models, and event history models. Topics include sampling, estimation, and model interpretation.

ECON 7031. Microeconomics of Innovation. 3 Credit Hours.
Historical evolution of institutions that promote innovation, knowledge as a public good, prizes and intellectual property rights as incentive mechanisms, models of cumulative innovation, patent and copyright enforcement and litigation, private versus public funding, and the effects introduced by network externalities and globalization issues.

ECON 7032. Macroeconomics of Innovation. 3 Credit Hours.
Macroeconomic factors that lead to technological change, the roles played by technological innovation and knowledge spillovers as promoters of economic growth, and the scope for fiscal and monetary policies to foment research and development and hence economic growth.

ECON 7102. Environmental Economics I. 3 Credit Hours.
Topics include externalities, property rights, incentive design, emission taxes, tradable emission permits, renewable and nonrenewable resources, innovation incentives originating with environmental regulations and globalization, trans-boundary pollutants within and across nations, international environmental agreements, and the globalization impacts on the environment.

ECON 7103. Environmental Economics II. 3 Credit Hours.
Empirical course, built upon the theoretical topics covered in Environmental Economics I. Students are given an in-depth coverage of key empirical papers in environmental economics, either papers that have tested several hypotheses derived from theoretical models or papers that are advancing knowledge in the field, generating empirical results for which no theory yet exists.

ECON 7111. Industrial Organization I. 3 Credit Hours.
Topics include market structures and the strategic behavior of firms (monopoly, oligopoly, imperfect competition), research and development, adoption of new technologies, regulations, procurement, antitrust law and competition policy.

ECON 7112. Industrial Organization II. 3 Credit Hours.
Empirical course that trains students to empirically examine the theoretical issues arising in Industrial Organization I. Students are taught about how to use existing data, collect and compile their own datasets and use frontier methods in empirical Industrial Organization to test hypotheses that originate from the theories related to pricing, product and process innovation, among others.

ECON 7121. International Economics I. 3 Credit Hours.
Topics include Ricardian and Hecksher-Ohlin models, extensions to many goods and factors, trade in intermediate inputs and wages, increasing returns, gains from trade and regional agreements, import tariffs and dumping, import quotas and export subsidies, political economy of trade policy and trade and endogenous growth. It also examines the relationship between international trade, foreign direct investment and technological innovation and diffusion.

ECON 7122. International Economics II. 3 Credit Hours.
Empirical extension of International Economics I, which surveys the empirical literature and presents the key empirical results related to the topics discussed in the theoretical course. It also discusses frontier empirical work in the field, empirical studies that go beyond the testable hypotheses originated with theory.

ECON 7130. Research Development and Presentation Workshop. 3 Credit Hours.
Lecture topics include instructions on writing research papers in Economics and presenting their work. Contents of presentations and research undertaken by students depend on students' research interests. Students receive personalized feedback on research and presentations.
ECON 8801. Special Topics. 1 Credit Hour.
ECON 8802. Special Topics. 2 Credit Hours.
ECON 8803. Special Topics. 3 Credit Hours.
ECON 8910. Special Problems. 1-21 Credit Hours.
ECON 8990. Special Problems. 1-21 Credit Hours.
ECON 8997. Teaching Assistantship. 1-9 Credit Hours.
For graduate students holding teaching assistantships.
ECON 8998. Research Assistantship. 1-9 Credit Hours.
For graduate students holding research assistantships.
ECON 9000. Doctoral Thesis. 1-21 Credit Hours.
