Interactive and intelligent computing is an emerging discipline on the frontier of ways computation impacts the external world. The School of Interactive Computing advances computing-mediated interactions by encompassing fields ranging from artificial intelligence and machine learning to graphics and computer vision to interface design and empirical methods. We don't just evaluate technology, we create technology that makes interactions better. Much of the research within the School of Interactive Computing produces new artifacts that embody new capabilities or methods. Examples include:

- Individuals working with traditional computers
- Groups of people using ubiquitous computing capabilities throughout various environments
- Researchers visualizing scientific data
- Students developing and altering middle school physics simulations
- Automated intelligent surveillance systems monitoring airport tarmacs
- Robots delivering pharmaceuticals to patients in hospitals

Whether an advance is in robotics, augmented reality, or ubiquitous computing, it is developed in the context of a prototype. School of Interactive Computing students become proficient in many areas such as mechanical or electrical engineering, and industrial design. The School of Interactive Computing develops practitioners, future innovators and researchers by offering numerous degree programs.

At the undergraduate-level, the School of Interactive Computing is an integral part of the College's BS in Computer Science, and oversees aspects of Computational Media's Bachelor's degree-offered jointly with the School of Literature, Communication and Culture (LMC). The School of Interactive Computing also administers the interdisciplinary Master’s in Human Computer Interaction (HCI) program in which students from the School of Interactive Computing, LMC, and Psychology participate. At the graduate-level the School of Interactive Computing students can pursue Master's and PhD degrees in Computer Science, or a PhD in Human-Centric Computing-the first of its kind in the nation. The School of Interactive Computing is also developing a Robotics PhD to be offered in conjunction with schools from the College of Engineering.

**Bachelor’s Degrees**

- Bachelor of Science in Computational Media (http://www.catalog.gatech.edu/programs/computational-media-bs)

**Master’s Degrees**

- Master of Science in Computer Science (http://www.catalog.gatech.edu/programs/computer-science-ms)
- Master of Science in Human-Computer Interaction (http://www.catalog.gatech.edu/programs/human-computer-interaction-ms)

**Doctoral Degrees**

- Doctor of Philosophy with a Major in Computer Science (http://www.catalog.gatech.edu/programs/computer-science-phd)
- Doctor of Philosophy with a Major in Human-Computer Interaction (http://www.catalog.gatech.edu/programs/human-centered-computing-phd)
- Doctor of Philosophy with a Major in Machine Learning (http://www.catalog.gatech.edu/programs/machine-learning-phd)
- Doctor of Philosophy with a Major in Robotics (http://www.catalog.gatech.edu/programs/robotics-phd)

**CS 1100. Freshman Leap Seminar. 1 Credit Hour.**

Small group discussions with first year students are led by one or more faculty members and include a variety of foundational, motivational, and topical subjects for computationalist.

**CS 1171. Introductory Computing in MATLAB. 1 Credit Hour.**

For students with a solid introductory computing background needing to demonstrate proficiency in the MATLAB language.

**CS 1301. Introduction to Computing. 3 Credit Hours.**

Introduction to computing principles and programming practices with an emphasis on the design, construction and implementation of problem solutions use of software tools.

**CS 1315. Introduction to Media Computation. 3 Credit Hours.**

Introduction to computation (algorithmic thinking, data structures, data transformation and processing, and programming) in a media and communication context.

**CS 1316. Representing Structure and Behavior. 3 Credit Hours.**

Modeling the structure of media (e.g., music, graphical scenes) using dynamic data structures. Designing objects as encapsulations of structure and behavior. Algorithms for simulating objects. May not be taken for credit by students who have credit for CS 1322.

**CS 1331. Introduction to Object Oriented Programming. 3 Credit Hours.**

Introduction to techniques and methods of object-oriented programming such an encapsulation, inheritance, and polymorphism. Emphasis on software development and individual programming skills.

**CS 1332. Data Structures and Algorithms for Applications. 3 Credit Hours.**

Computer data structures and algorithms in the context of object-oriented programming. Focus on software development towards applications.

**CS 1371. Computing for Engineers. 3 Credit Hours.**

Foundations of computing with an introduction to design and analysis of algorithms and an introduction to design and construction of programs for engineering problem-solving.

**CS 1372. Structured Program Design for Engineers. 3 Credit Hours.**

**CS 1801. Special Topics. 1 Credit Hour.**

Courses of timely interest to the profession, conducted by resident or visiting faculty.

**CS 1802. Special Topics. 2 Credit Hours.**

Courses of timely interest to the profession, conducted by resident or visiting faculty.

**CS 1803. Special Topics. 3 Credit Hours.**

Courses of timely interest to the profession, conducted by resident or visiting faculty.

**CS 1804. Special Topics. 4 Credit Hours.**

Courses of timely interest to the profession, conducted by resident or visiting faculty.

**CS 1805. Special Topics. 5 Credit Hours.**

Courses of timely interest to the profession, conducted by resident or visiting faculty.
CS 1XXX. Computer Sci Elective. 1-21 Credit Hours.

CS 2050. Introduction to Discrete Mathematics for Computer Science. 3 Credit Hours.

CS 2051. Honors - Induction to Discrete Mathematics for Computer Science. 3 Credit Hours.

CS 2110. Computer Organization and Programming. 4 Credit Hours.
An introduction to basic computer hardware, machine language, assembly language, and C programming.

CS 2200. Computer Systems and Networks. 4 Credit Hours.
A broad exposure to computer system structure and networking including software abstractions in operating systems for orchestrating the usage of the computing resources.

CS 2261. Media Device Architectures. 4 Credit Hours.
Controlling the interface between hardware and software in media devices. Machine-level programming (e.g., in C) to create graphics, generate sound, and support user interaction.

CS 2316. Data Manipulation for Science and Industry. 3 Credit Hours.
Reading, manipulating, and exporting data for engineering, business, and scientific applications. Covers GUI's, File I/O, basic SQL, and web scraping. Emphasis on software development.

CS 2335. Software Practicum. 3 Credit Hours.
Methods for solving large programming problems. Techniques for quality assurance, managing programs, working in teams, analyzing problems, and producing effective solutions.

CS 2340. Objects and Design. 3 Credit Hours.
Object-oriented programming methods for dealing with large programs. Focus on quality processes, effective debugging techniques, and testing to assure a quality product.

CS 2345. Advanced Practical Object-Oriented Programming. 4 Credit Hours.
This course presents important programming principles that should be considered when using a non-automatic memory management complex language (such as C++). Templating, generic programming, resource acquisition is initialization (RAII), and smart pointers are a few examples. Credit not awarded for both CS 2345 and ECE 2036.

CS 2600. Knowledge Representation and Processing. 4 Credit Hours.
Introduction to the representation and manipulation of complex symbolic and sub-symbolic information.

CS 2698. Undergraduate Research Assistantship. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty member.

CS 2699. Undergraduate Research. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty member.

CS 2701. Startup Lab: Introduction to Technology Ventures. 3 Credit Hours.
Elements of technology venture creation including opportunity identification and validation, ideation, customer discovery, markey analysis, minimum viable product development, business models, intellectual property, and capital raises. Cross-listed with COE 2701.

CS 2801. Special Topics. 1 Credit Hour.
Courses of timely interest to the profession, conducted by resident or visiting faculty.

CS 2802. Special Topics. 2 Credit Hours.
Courses of timely interest to the profession, conducted by resident or visiting faculty.

CS 2803. Special Topics. 3 Credit Hours.
Courses of timely interest to the profession, conducted by resident or visiting faculty.

CS 2804. Special Topics. 4 Credit Hours.
Courses of timely interest to the profession, conducted by resident or visiting faculty.

CS 2805. Special Topics. 5 Credit Hours.
Courses of timely interest to the profession, conducted by resident or visiting faculty.

CS 2XXX. Computer Sci Elective. 1-21 Credit Hours.

CS 3101. Computer Science Ventures. 3 Credit Hours.
Students will learn how computer-science-based ventures are developed. The course is project-based. Students propose, analyze, pitch, design, implement, package and market web-2.0 and virtual-world-based products and services.

CS 3210. Design of Operating Systems. 3 Credit Hours.
Operating systems concepts, including multi-threading, scheduling, synchronization, communication, and access control. Projects will cover design and implementation of several operating systems components.

CS 3220. Computer Structures: Hardware/Software Codesign of a Processor. 3 Credit Hours.
Principles in pipelined processor design, with emphasis on the need for a close interaction between code generation and architecture.

CS 3240. Languages and Computation. 3 Credit Hours.
Interpreters as abstract machines and the tools used to construct them, such as scanners and parsers. An introduction to models of computation as embodied by different programming languages. Limits of and relationships between these models.

CS 3251. Computer Networking I. 3 Credit Hours.
Introduction to problems in computer networking, including error recovery, medium access, routing, flow control, and transport. Emphasis on current best practice. Includes programming of networked applications.

CS 3300. Introduction to Software Engineering. 3 Credit Hours.
Team-based project class to introduce and apply software engineering principles and practices.

CS 3311. Part 1 of a 2 semester project design and implementation sequence conjoined with Tech Communications. 1 Credit Hour.
Part 1 of a 2 semester project design and implementation sequence conjoined with Technical Communications. Prepare requirements, design and project plans. Develop a basic prototype of the desired system. Project is completed in CS 3312-Project Implementation. Credit will not be awarded for CS 3311 and CS 4911.
CS 3312. Part 2 of a semester project design and implementation sequence conjoined with Tech Communications. 2 Credit Hours.
The second part of a 2 semester project design and implementation sequence conjoined with Technical Communications. Implement a project designed in CS 3311. Credit will not be awarded for CS 3312 and CS 4911.

CS 3451. Computer Graphics. 3 Credit Hours.
Geometric constructions; transformations; perception; reflection models; photorealistic; non-photorealistic, and image-based rendering; rendering software and APIs; triangle-mesh processing; graphic acceleration; user-interaction, design and animation.

CS 3510. Design and Analysis of Algorithms. 3 Credit Hours.
Basic techniques of design and analysis of efficient algorithms for standard computational problems. NP-Completeness. Credit not allowed for both CS 3510 and CS 3511.

CS 3511. Design and Analysis of Algorithms, Honors. 3 Credit Hours.
Techniques of design and analysis of efficient algorithms for standard computational problems. NP-Completeness Project. Credit not allowed for both CS 3511 and CS 3510.

CS 3600. Introduction to Artificial Intelligence. 3 Credit Hours.
An introduction to artificial intelligence and machine learning. Topics include intelligent system design methodologies, search and problem solving, supervised and reinforced learning.

CS 3630. Introduction to Perceptron and Robotics. 3 Credit Hours.
Covers fundamental problems and leading solutions for computer and robot perception and action from the point of view of autonomous robot navigation.

CS 3651. Prototyping Intelligence Appliances. 4 Credit Hours.
Hands-on course teaching the fundamentals of electronics of electrical and mechanical prototyping.

CS 3743. Analysis of Emerging Technologies. 3 Credit Hours.
Analysis of emerging technologies and their impacts for firm practice, market practice, policy, and society. Credit not allowed for both CS 3743 and MGT 3743 or ME 3743.

CS 3750. Human Computer Interface Design and Evaluation. 3 Credit Hours.
Human computer interface is considered in terms of user-system compatibility. Concepts in human factors and interface design are covered in relation to capabilities of both humans and computers. Crosslisted with PSYC 3750.

CS 3790. Introduction to Cognitive Science. 3 Credit Hours.
Multidisciplinary perspectives on cognitive science. Interdisciplinary approaches to issues in cognition, including memory, language, problem solving, learning, perception, and action. Crosslisted with PST, PSYC, and ISYE 3790.

CS 3801. Special Topics. 1 Credit Hour.
Courses of timely interest to the profession, conducted by resident or visiting faculty.

CS 3802. Special Topics. 2 Credit Hours.
Courses of timely interest to the profession, conducted by resident or visiting faculty.

CS 3803. Special Topics. 3 Credit Hours.
Courses of timely interest to the profession, conducted by resident or visiting faculty.

CS 3804. Special Topics. 4 Credit Hours.
Courses of timely interest to the profession, conducted by resident or visiting faculty.

CS 3805. Special Topics. 5 Credit Hours.
Courses of timely interest to the profession, conducted by resident or visiting faculty.

CS 3XXX. Computer Sci. 1-21 Credit Hours.

CS 4001. Computing, Society, and Professionalism. 3 Credit Hours.
Examines the role and impact of information and communication technology in society, with emphasis on ethical, professional, and public policy issues. Credit not allowed for both CS 4001 and 4002.

CS 4002. Robots and Society. 3 Credit Hours.
Examines the role and impact of robotics, distributed sensing and actuation, ubiquitous computing and related technology in society, emphasizing ethical, professional and public policy issues. Credit not allowed for both CS 4001 and 4002.

CS 4005. Next-Generation Computing Technologies. 3 Credit Hours.
Students will explore new paradigms in how content is created, distributed, and consumed, with hands-on demos of next-generation computing technologies.

CS 4010. Introduction to Computer Law. 3 Credit Hours.
Provides an introduction to copyrights, patents, trade secrets, trademarks, and commercial law pertaining to computer software and hardware.

CS 4052. Systems Analysis and Design. 3 Credit Hours.
An introductory course on the development life cycle of business information systems. It covers analysis and design tools and methodology. Credit not allowed for both CS 4052 and MGT 4045.

CS 4057. Business Process Analysis and Design. 3 Credit Hours.
Business processes are the mechanisms by which work is organized and performed. This course covers the analysis of business technology. Credit will not be awarded for both CS 4057 and MGT 4057.

CS 4210. Advanced Operating Systems. 3 Credit Hours.
Operating system abstractions and their implementations, multi-threading, efficient inter-address communication, high-level synchronization, introduction to multi-processor and distributed operating systems, real-time systems.

CS 4220. Programming Embedded Systems. 3 Credit Hours.
Design principles, programming techniques, and case studies of embedded real-time systems. Interface techniques and devices. Representations and reasoning about physical processes.

CS 4233. Parallel Computer Architecture. 3 Credit Hours.
The objective of this course is to develop an in-depth understanding of the design, implementation, and evaluation of modern parallel computers. Credit not allowed for both CS 4233 and CS 7110.

CS 4235. Introduction to Information Security. 3 Credit Hours.
Terms/concepts, threats, controls; problem definition; comprehensive information security model; security for operating systems, databases, network/distributed systems; administering security; legal/ethical/policy issues. Credit not allowed for both CS 4235 and CS 6035.

CS 4237. Computer and Network Security. 3 Credit Hours.
Fundamental concepts and principles of computer security, operating system and database security, secret key and public key cryptographic algorithms, hash functions, authentication, firewalls and intrusion detection systems, IPSec ad VPN, and wireless security.

CS 4240. Compilers, Interpreters, and Program Analyzers. 3 Credit Hours.
Study of techniques for the design and implementation of compilers, interpreters, and program analyzers, with consideration of the particular characteristics of widely used programming languages.
CS 4245. Introduction to Data Mining and Analysis. 3 Credit Hours.
Computational techniques for analysis of large, complex datasets, covering fundamental aspects as well as modern data mining and analysis techniques. Cross-listed with ISYE 4245.

CS 4251. Computer Networking II. 3 Credit Hours.
Principles of computer networks, including medium access, ARQ protocols, routing, congestion avoidance, and control. Emphasis on design options and tradeoffs. Includes significant network application programming.

CS 4255. Introduction to Network Management. 3 Credit Hours.
Introduction to SNMP-based network management. Practical application to network and system management including hands-on lab practice.

CS 4260. Telecommunications Systems. 3 Credit Hours.
Study of telecommunication systems emphasizing functional roles of the various portions of the system and how various functional components support and interact with one another.

CS 4261. Mobile Applications and Services for Converged Networks. 3 Credit Hours.
This course provides an introduction to mobile applications and services with an emphasis on voice and data service integration in modern commercial networks.

CS 4270. Data Communications Laboratory. 3 Credit Hours.
Detailed study of the principles of data transmission systems and their performance, reinforced by laboratory exercises.

CS 4280. Survey of Telecommunications and the Law. 3 Credit Hours.
Overview of telecommunication regulation at the federal, state, and judicial levels; review of FCC policies and restrictions on Bell operating companies under the AT&T Consent Agreement.

CS 4290. Advanced Computer Organization. 3 Credit Hours.
Topics concerning the hardware design of computer systems. Advanced techniques in high-performance pipelined central processing units. Memory and I/O systems. Parallel processors including shared-memory multiprocessors and cluster computers. Credit is not allowed for both CS 4290 and any of the following courses: CS 6290, ECE 4100, ECE 6100.

CS 4320. Introduction to Software Processes. 3 Credit Hours.
The course will provide students with an overall context in which software systems are developed from the viewpoint of processes that support development. Software engineering is described as the set of activities developers engage in to create high-quality products within schedule and budget constraints.

CS 4330. Software Engineering Applications. 3 Credit Hours.
Software engineering methods specific to classes of applications or systems, including information systems and embedded, real-time systems.

CS 4342. Software Generation, Testing, and Maintenance. 3 Credit Hours.
Methods and principles for program generation, testing, and managing the evolution of software systems.

CS 4365. Introduction to Enterprise Computing. 3 Credit Hours.
A survey of basic software tools and techniques used in mission-critical systems and applications, combined with in-depth study of fundamental principles underlying enterprise computing. Credit not allowed for both 4365 and CS 6365.

CS 4392. Programming Languages. 3 Credit Hours.

CS 4400. Introduction to Database Systems. 3 Credit Hours.
Comprehensive coverage of mainstream database concepts such as the entity-relationship model, relational databases, query languages, and database design methodology. Includes a project. Credit not allowed for both CS 4400 and CS 6402.

CS 4420. Database System Implementation. 3 Credit Hours.
Study of fundamental software components/algorithms of a database system, including the file manager, query engine, lock manager, and recovery manager. Includes a project component. Credit not allowed for both CS 4420 and CS 6422.

CS 4432. Information Systems Design. 3 Credit Hours.
The analysis, design, and implementation of information systems. Topics include requirements analysis, design representations, implementation techniques, and evaluation of systems.

CS 4440. Emerging Database Technologies and Applications. 3 Credit Hours.
The course will cover current developments including distributed, object-oriented, temporal-spatial, Web-based, mobile, and active database technologies, and data warehousing and mining applications.

CS 4452. Human-Centered Computing Concepts. 3 Credit Hours.
Introduction to programming and human-centered principles of computing based on a communications and media computation context. Introduces user interface programming.

CS 4455. Video Game Design and Programming. 3 Credit Hours.
Techniques for electronic game design and programming, including graphics game engines, motion generation, behavioral control for autonomous characters, interaction structure, social and interface issues of multi-user play, and the business aspects of game development. Credit not allowed for both CS 4455 and CS 6457.

CS 4460. Introduction to Information Visualization. 3 Credit Hours.
Introduction to principles and techniques of information visualization, the presentation of primarily abstract data to help people understand, analyze and make sense of data. Students will not receive credit for both CS 4460 and CS 7450.

CS 4464. Computational Journalism. 3 Credit Hours.
A study of computational and technological advancements in journalism with emphasis on technologies for developing new tools and their potential impact on news and information. Credit not allowed for both CS 4464 and CS 6465.

CS 4470. Introduction to User Interface Software. 3 Credit Hours.
Concepts, techniques, structures, and strategies for implementation of interactive software.

CS 4472. Design of Online Communities. 3 Credit Hours.
Introduction to the design of online communities. Students study an existing community in depth. Credit not allowed for both CS 4472 and CS 6470.

CS 4475. Computational Photography. 3 Credit Hours.
An introductory course on the scientific, technical, perceptual, and aesthetic principles of pictures. Emphasis is on the techniques of image formation, analysis, merging, modification and their use for depiction of reality on a 2D medium of photographs.
CS 4476. Introduction to Computer Vision. 3 Credit Hours.
Introduction to computer vision including fundamentals of image formation, camera imaging geometry, feature detection and matching, stereo, motion estimation and tracking, image classification and scene understanding. Credit will not be awarded for both CS 4476 and CS 4495 or CS 6476.

CS 4480. Digital Video Special Effects. 3 Credit Hours.
A study of digital multimedia and the analysis and synthesis of digital video. Special attention paid to techniques for generating video special effects.

CS 4495. Computer Vision. 3 Credit Hours.
An introduction to computer vision and machine perception. An intensive study of the process of generating a symbolic description of the scene by interpretation of images(s). Credit not awarded for both CS 4495 and CS 6476.

CS 4496. Computer Animation. 3 Credit Hours.
Motion techniques for computer animation and interactive games (keyframing, procedural methods, motion capture, and simulation) and principles for storytelling, composition, lighting, and interactivity.

CS 4497. Computational Aesthetics. 3 Credit Hours.
Aesthetics plays a key role in society and economy. Students will invent and test beautification algorithms for colors, music, and animations and more.

CS 4510. Automata and Complexity Theory. 3 Credit Hours.
Computational machine models and their language classes. Undecidability. Resource-bounded computations. Central complexity-theoretic concepts such as complexity classes, reducibility and completeness.

CS 4520. Approximation Algorithms. 3 Credit Hours.
Approximation algorithms for NP-hard optimization problems, design and analysis techniques for such algorithms. Credit not allowed for both CS 4520 and CS 7520.

CS 4530. Randomized Algorithms. 3 Credit Hours.
Efficient randomized algorithms with improved performance over deterministic algorithms, or for NP-hard optimization problems, design and analysis techniques for such algorithms. Credit not allowed for both CS 4530 and CS 7530.

CS 4540. Advanced Algorithms. 3 Credit Hours.
Advanced techniques for designing and analyzing efficient algorithms for combinatorial, algebraic, and number theoretic problems. Credit not allowed for both CS 4540 and CS 6550.

CS 4550. Scientific Data Processing and Visualization. 3 Credit Hours.
Foundations and algorithms underlying the development and application of tools for the efficient transmission, analysis, filtering, and visualization of large scientific data sets.

CS 4560. Verification of Systems. 3 Credit Hours.
Technique for verifying, validating and testing software and hardware systems. Topics will include modeling, abstraction methods, evaluation and certification, and computer-aided verification methods.

CS 4590. Principles and Applications of Computer Audio. 3 Credit Hours.
A well-rounded exploration of digital audio and its importance in current research and applications. Exposes students to the principles, technology, and current research of computer audio.

CS 4605. Mobile and Ubiquitous Computing. 3 Credit Hours.
Investigates the infrastructure required to develop mobile and ubiquitous computing applications and establishes major research themes and experimental practices.

CS 4611. Artificial Intelligence Problem Solving. 3 Credit Hours.
Basic concepts and methods of AI problem solving, knowledge representation, reasoning, and learning.

CS 4613. Knowledge Systems Engineering. 3 Credit Hours.
Techniques for constructing large knowledge-based systems. Advanced symbolic AI techniques. Constraint systems.

CS 4615. Knowledge-Based Modeling and Design. 3 Credit Hours.
Information-processing theories of modeling and design; topics include design decision-making, problem-solving and learning, and knowledge-based modeling and design.

CS 4616. Pattern Recognition. 3 Credit Hours.
An introductory course on pattern classification and decision problems with applications to character recognition, image analysis, and speech recognition.

CS 4622. Case-Based Reasoning. 3 Credit Hours.
Based on human problem-solving, CBR has had many successes in industry and research. Topics include case representation, indexing and retrieval, similarity assessment, adaptation, learning. Credit not allowed for both CS 4622 and CS 7620.

CS 4625. Intelligent and Interactive Systems. 3 Credit Hours.
Explores how human-computer interaction and machine learning can interact to create personalized information environments. Emphasis on current research efforts from both fields.

CS 4632. Advanced Intelligent Robotics. 3 Credit Hours.
Hands-on course in which students program autonomous mobile robots and solve complex tasks for robot teams.

CS 4635. Knowledge-Based Artificial Intelligence. 3 Credit Hours.
Structured knowledge representation; knowledge-based methods of reasoning and learning; problem-solving, modeling and design.

CS 4641. Machine Learning. 3 Credit Hours.
Machine learning techniques and applications. Topics include foundational issues; inductive, analytical, numerical, and theoretical approaches; and real-world applications.

CS 4646. Machine Learning for Trading. 3 Credit Hours.
This course introduces students to the real world challenges of implementing machine learning based strategies including the algorithmic steps from information gathering to market orders.

CS 4649. Robot Intellit Planning. 3 Credit Hours.
We investigate algorithms for robots and complex systems that make intelligent decisions. Emphasis on the theoretical and empirical properties of classical, geometric, stochastic/dynamic planning.

CS 4650. Natural Language Understanding. 3 Credit Hours.
Methodologies for designing systems that comprehend natural language. Topics include lexical analysis, parsing, interpretation of sentences, semantic representation, organization of knowledge, and inference mechanisms. Credit not allowed for both CS 4650 and CS 7650.

CS 4660. Introduction to Educational Technology. 3 Credit Hours.
Introduction to the theory and practice of educational technology. Covers learning theory applicable to educational technology, explains major research findings.

CS 4665. Educational Technology: Design and Evaluation. 3 Credit Hours.
Intensive project class in which students design, implement, and evaluate a piece of educational technology, applying the theory learned in Introduction to Educational Technology.
CS 4670. Computer-Supported Collaborative Learning. 3 Credit Hours.
Research and practice in computer-supported collaborative learning.
Review of existing systems and research, as well as evaluation and
design methods.

CS 4675. Internet Computing Systems, Services and Applications. 3
Credit Hours.
Focusing on fundamental issues, concepts, techniques, and technical
challenges that are critical for designing and developing Internet
systems, services and applications. Credit not allowed for both CS 4675
and CS 6675.

CS 4685. Pervasive Systems and Networking. 3 Credit Hours.
In-depth study of systems and wireless networking issues in enabling
pervasive computing environments and applications using a hand-on
approach.

CS 4690. Empirical Methods for User Interface Design and Evaluation. 3
Credit Hours.
Introduction to empirical methods for gathering requirements and
evaluating the end-user and usability of software systems.

CS 4698. Undergraduate Research Assistantship. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty
member.

CS 4699. Undergraduate Research. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty
member.

CS 4710. Introduction to Computing Concepts for Bioinformatics. 4
Credit Hours.
Introduction to programming concepts and computing tools such as
formal models and algorithms with applications from conceptual biology.
May not be used by computer science majors for degree credit.

CS 4725. Information Security Strategies and Policies. 3 Credit Hours.
Information security vulnerabilities and risks; legal, cost, privacy, and
technology constraints; derivation of strategies; technical and procedural
means of achieving desired results. Credit will not be awarded for both
CS 4725 and CS 6725 or MGT 4725 or MGT 6725.

CS 4726. Privacy, Technology, Policy, and Law. 3 Credit Hours.
This course takes a multi-disciplinary approach to privacy, a topic of great
interest in the technology, policy, ethics, law, and business realms. Credit
will not be awarded for both CS 4726 and MGT 4726 or MGT 6726 or
CS 6726.

CS 4731. Game AI. 3 Credit Hours.
Examines the expressive possibilities of artificial intelligence techniques
in computer games. Students learn AI programming techniques, and how
they strongly interface with game design.

CS 4741. Integrative Management Development-Project Preparation. 3
Credit Hours.
Individual and group-based experiential learning activities to develop
integrated human system management skills that prepare students for
more successful capstone collaboration and learning. Credit not allowed
for both CS 4741 and MGT 4741 or ME 4741.

CS 4742. Integrated Computing and Management Capstone Project. 4
Credit Hours.
Project-based course for students in Computing and Management minor
to work in interdisciplinary teams on projects provided by corporate
affiliates. Credit not allowed for both CS 4742 and MGT 4742 or ME 4742.

CS 4745. Information and Communication Technologies and Global
Development. 3 Credit Hours.
Focus on technology design, adoption, and use as seen through the lens
of global development.

CS 4752. Philosophical Issues in Computation. 3 Credit Hours.
Metaphysical and epistemological issues in the foundations, methods,
and implications of computing. Issues include: minds, brains, and
machines; representation and language; simulating nature. Crosslisted
with PST 4752.

CS 4770. Mixed Reality Experience Design. 3 Credit Hours.
Focuses on informal design, integration of media theory, HCI and
technology issues. Significant group design projects.

CS 4791. Integrative Project in Cognitive Science. 3 Credit Hours.
An integrative course in cognitive science focusing on the integration and
use of concepts and skills from cognitive science. A different integrative
project or set of projects will be taken on each semester; students will
contribute on the basis of their background and skill. Crosslisted with
PST, PSYC, and ISYE 4791.

CS 4792. Design Project in Cognitive Science. 3 Credit Hours.
Individual project with a cognitive science faculty member, designed as a
supplement to the student’s senior design project or thesis in their major
area. Crosslisted with PST, PSYC, and ISYE 4792.

CS 4793. Integrative Perspectives in Cognitive Science. 3 Credit Hours.
An integrative course in cognitive science which uses a focus topic
to deepen interdisciplinary perspective and develop cognitive science
knowledge and skills.

CS 4801. Special Topics. 1 Credit Hour.
Courses of timely interest to the profession, conducted by resident or
visiting faculty.

CS 4802. Special Topics. 2 Credit Hours.
Courses of timely interest to the profession, conducted by resident or
visiting faculty.

CS 4803. Special Topics. 3 Credit Hours.
Courses of timely interest to the profession, conducted by resident or
visiting faculty.

CS 4804. Special Topics. 4 Credit Hours.
Courses of timely interest to the profession, conducted by resident or
visiting faculty.

CS 4805. Special Topics. 5 Credit Hours.
Courses of timely interest to the profession, conducted by resident or
visiting faculty.

CS 4851. Special Topics. 1 Credit Hour.
Special Topics in CS - Lab.

CS 4853. Special Topics. 3 Credit Hours.
Special Topics in CS (lecture and supervised lab).

CS 4863. Special Topics. 3 Credit Hours.
Special Topics.

CS 4893. Special Topics. 3 Credit Hours.
Special Topics for CS (lecture + lab).

CS 4901. Special Problems. 1-21 Credit Hours.
An investigation of significant areas of information in computer science.
Guided study and research.

CS 4902. Special Problems. 1-21 Credit Hours.
An investigation of significant areas of information and computer
science. Guided study and research.
CS 4903. Special Problems. 1-21 Credit Hours.
An investigation of significant areas of information and computer science. Guided study and research.

CS 4911. Design Capstone Project. 1-21 Credit Hours.
Team-based capstone experience allowing students to analyze a problem for a customer and manage the solution development through the full project life cycle.

CS 4912. Design Capstone Project. 3 Credit Hours.
Team-based capstone experience allowing students to analyze a problem for a customer and manage the solution development through the full project life cycle.

CS 4980. Research Capstone Project. 1-21 Credit Hours.

CS 4XXX. Computer Sci Elective. 1-21 Credit Hours.

CS 6010. Principles of Design. 3 Credit Hours.
This is an interactive hands-on course that will teach students the principles of design at the individual level.

CS 6035. Introduction to Information Security. 3 Credit Hours.
A broad spectrum of information security threats, basic cryptography, software vulnerabilities, programming for malware, operating system protections, network security, privacy, data mining, computer crime.

CS 6150. null. 3 Credit Hours.
Exploring challenges faced by underserved populations and developing countries from a computing perspective.

CS 6200. Graduate Introduction to Operating Systems. 3 Credit Hours.
This course teaches operating system abstractions, mechanisms, and their implementations, including for concurrency (threads) and synchronization, resource management (CPU, memory, I/O), and distributed services.

CS 6210. Advanced Operating Systems. 3 Credit Hours.
Introduction to graduate-level topics in operating systems using research papers, textbook excerpts, and projects. Provides students thorough comprehension of distributed and parallel computer systems.

CS 6220. Big Data Systems and Analytics. 3 Credit Hours.
This course will cover the concepts, techniques, algorithms, and systems of big data systems and data analytics, with strong emphasis on big data processing systems, fundamental models and optimizations for data analytics and machine learning, which are widely deployed in real-world big data analytics and applications.

CS 6230. High-Performance Parallel Computing: Tools and Applications. 3 Credit Hours.
Introduction to MIMD parallel computation, using textbook excerpts, research papers, and projects on multiple parallel machines. Emphasizes practical issues in high-performance computing.

CS 6235. Real-Time System Concepts and Implementation. 3 Credit Hours.
Principles of real-time systems, as occurring in robotics and manufacturing, interactive, and multimedia applications. Reviews and uses real-time operating systems.

CS 6238. Secure Computer Systems. 3 Credit Hours.
Design principles of secure systems, authentication, access control and authorization, discretionary and mandatory security policies, secure kernel design, and secure databases.

CS 6241. Design and Implementation of Compilers. 3 Credit Hours.
Design and implementation of modern compilers, focusing upon optimization and code generation.

CS 6245. Compiling for Parallelism. 3 Credit Hours.
Design and implementation of compilers for parallel and distributed computers, focusing upon optimization and code generation.

CS 6246. Object-Oriented Systems and Languages. 3 Credit Hours.
Design and implementation of object-oriented systems. Aspect-oriented programming, type systems, OO language implementation (virtual dispatch, GC), OO language design (genericity, reflection, mixins).

CS 6250. Computer Networks. 3 Credit Hours.
Principles and practice of computer networks, including signaling and framing, error control, medium access, routing, congestion control, end-to-end transport, and network APIs.

CS 6255. Principles of Network Management. 3 Credit Hours.
Focus on network, system, and applications management. Principles and practice of various network management standards will be presented. Course includes project assignment.

CS 6260. Applied Cryptography. 3 Credit Hours.
Cryptographic algorithms, cryptanalysis, symmetric cryptography, public key cryptography, DES, AES, RSA, hash and MAC functions, digital signatures, pseudo-random generators, cryptographic protocols, SSL/TLS, SET. Credit not allowed for both CS 6260 and ECE 6280.

CS 6262. Network Security. 3 Credit Hours.
Design principles of secure network protocols and systems, authentication, integrity, confidentiality, privacy, information hiding, digital watermarking, access control, firewall, intrusion detection, and case studies.

CS 6263. Intro to Cyber-Physical Systems Security. 3 Credit Hours.
This course provides an introduction to security issues relating to various cyber-physical systems including industrial control systems and those considered critical infrastructure systems.

CS 6265. Information Security Laboratory. 3 Credit Hours.
Computer systems and network vulnerabilities, information warfare, network and operating system security techniques, security analysis tools.

CS 6266. Information Security Practicum. 5 Credit Hours.
Capstone independent study placing each student in a commercial, industrial, academic, or government setting where they must solve real-world security problems.

CS 6269. Formal Models and Methods for Information Assurance. 3 Credit Hours.
Logical foundations of high-assurance systems, formal models for access control, authentication, and trust; techniques for constructing high-assurance systems.

CS 6280. Performance Evaluation of Communication Networks. 3 Credit Hours.
Methods for evaluating the performance of communication networks with emphasis on modeling, mathematical analysis, computer simulation, and measurement.

CS 6290. High-Performance Computer Architecture. 3 Credit Hours.
Topics concerning very high-performance computers including techniques exploiting parallelism in single and multiple processor systems. Credit not allowed for both CS 6290 and any of the following courses: CS 4290, ECE 4100, ECE 6100.

CS 6291. Embedded Software Optimizations. 3 Credit Hours.
First, this course introduces the student to embedded domain-specific processor and instruction set design issues. Next, machine-specific optimizations for performance and for energy consumption are discussed.
CS 6300. Software Development Process. 3 Credit Hours.
The process of developing software systems. Includes development and assessment of processes, their instantiation in actual product development, and techniques ensuring quality of developed products.

CS 6301. Advanced Topics in Software Engineering. 3 Credit Hours.
This project-based course will cover fundamental principles, advanced techniques, and tools for the development of high-quality, industrial-strength software.

CS 6310. Software Architecture and Design. 3 Credit Hours.
Principles and concepts involved in the design and analysis of large software systems.

CS 6320. Software Requirements Analysis and Specification. 3 Credit Hours.
Methods and principles for determining, documenting, analyzing, and formally specifying requirements for software systems.

CS 6330. Software Generation, Testing, and Maintenance. 3 Credit Hours.
Introduction to methods and principles for programming, testing, and managing the evolution of software systems.

CS 6340. Advanced Topics in Software Analysis and Testing. 3 Credit Hours.
Fundamental principles and advanced techniques for static and dynamic program analysis and software testing. Software reliability, resilience, and trustworthiness.

CS 6355. Intro Enterprise Comput.. 3 Credit Hours.
Survey of basic software concepts and techniques used in mission-critical systems and applications, combined with in-depth study of fundamental principles underlying enterprise computing. Credit not allowed for both CS 6355 and CS 4355.

CS 6390. Programming Language Design. 3 Credit Hours.
Design, structure, and goals of programming languages. Object-oriented, logic, functional, and traditional languages. Semantic models. Parallel programming languages.

CS 6400. Database Systems Concepts and Design. 3 Credit Hours.
Study of fundamental concepts with regard to relational databases. Topics covered include database design, query processing, concurrency control, and recovery. Credit not given for both CS 6400 and CS 6754.

CS 6402. Databases and Information Security. 3 Credit Hours.
Fundamentals of designing and using databases: conceptual data models to database-specific models, SQL, storage structures. Security-related topics include privacy, access control, backup, recovery, SQL injection. Credit not allowed for both CS 6402 and CS 4400.

CS 6410. Object-Oriented Database Models and Systems. 3 Credit Hours.
Study of advanced database concepts as they apply to object-oriented database systems. Topics include semantic data models, object-oriented query languages, tools, and applications.

CS 6420. Temporal, Spatial and Active Databases. 3 Credit Hours.
Study of advanced database concepts for temporal databases with emphasis on storage structure, processing and query languages, as well as active database concepts and implementation.

CS 6422. Database System Implementation. 3 Credit Hours.
Design and implementation of a database system covering: storage manager, query optimizer, transaction manager, and recovery manager. Study of the advantages of different implementation algorithms. Credit not allowed for both CS 6422 and CS 4420.

CS 6430. Parallel and Distributed Database Systems and Applications. 3 Credit Hours.
Study of algorithms and performance in advanced systems. Systems include parallel, distributed, and client-server databases. Applications include data mining and on-line analytical processing.

CS 6440. Information to Health Informatics. 3 Credit Hours.
A broad review of the US health system and the application of informatics to the clinical practice of medicine, digital imaging, public health and bioinformatics.

CS 6451. Introduction to Human-Centered Computing. 3 Credit Hours.
Introduction to the range of issues across the HCC disciplines, including design and research methodologies: cognitive, social, and cultural theories; assessment and evaluation: ethical issues.

CS 6452. Prototyping Interactive Systems. 3 Credit Hours.
Introduction to design, prototyping and implementation of systems for human-centered computing. Focuses on core concepts in computer science and implications for interactive systems.

CS 6454. Qualitative Methods for Design of Human Computer Interaction. 3 Credit Hours.
Qualitative methods for HCI including data collection through interviews, observations and design, analysis using research and industry standards, and methods for communicating findings to industry.

CS 6455. User Interface Design and Evaluation. 3 Credit Hours.
Examines usability in the software development process with an emphasis on usability, requirements, methodology, design, and evaluation.

CS 6460. Educational Technology: Conceptual Foundations. 3 Credit Hours.
Introduction to educational technology, with an emphasis on theoretical foundations. Introduces basic philosophies, approaches, and technologies. Analyzes issues surrounding technology’s impact on education.

CS 6461. CS Education Research. 3 Credit Hours.
Introduction to computing education research (CER). History and influential early work. Learning goals for different populations. Design of research studies in CER.

CS 6465. Computational Journalism. 3 Credit Hours.
Technology is rapidly affecting how news information is gathered, reported, visualized, aggregated, summarized, distributed, and consumed. This class studies the computational technologies that impact journalism. Credit not allowed for both CS 6455 and CS 4465.

CS 6470. Design of Online Communities. 3 Credit Hours.
Introduction to the design of online communities. Students study an existing community in depth, and then develop a new community design. Credit not allowed for both CS 6470 and CS 4472.
CS 6471. Computational Social Science. 3 Credit Hours.
This graduate seminar focuses on text and network analysis of data with applications to domains such as political science, sociolinguistics, and public health.

CS 6474. Social Computing. 3 Credit Hours.
Design and prototype new social computing systems, as well as analyze social media data.

CS 6475. Computational Photography. 3 Credit Hours.
This class explores the impact of computation on the entire workflow of photography, from how light is captured by a camera, to how the images are processed, enhanced, and improved to generate novel photographs.

CS 6476. Introduction to Computer Vision GR. 3 Credit Hours.
Introduction to computer vision including fundamentals of image formation, camera imaging geometry, feature detection and matching, stereo, motion estimation and tracking, image classification and scene understanding. Credit not awarded for both CS 6476 and CS 4495 or CS 4476.

CS 6480. Computer Visualization Techniques. 3 Credit Hours.
Principles, techniques, and practice in data, information, multivariate, and scientific visualization. Includes visualization methods, data structures, examples, and tools.

CS 6485. Visualization Methods for Science and Engineering. 3 Credit Hours.
Algorithms, software, and practical applications of visualization techniques in science, engineering, business, and medicine. Includes data structures, multivariate visualization, interactive visualization, and visual representations and examples. Computer science students cannot receive credit for this course.

CS 6491. Foundations of Computer Graphics. 3 Credit Hours.
Mathematical/physical/perceptual principles and modeling/rendering techniques used to create, represent, display, and animate models of 3D shapes and their properties.

CS 6497. Computational Aesthetics. 3 Credit Hours.
Aesthetics play a key role in society and economy. Students will invent and test beautification algorithms for colors, music, and animations and more.

CS 6505. Computability, Algorithms, and Complexity. 3 Credit Hours.
Important concepts from computability theory; techniques for designing algorithms for combinatorial, algebraic, and number-theoretic problems; basic concepts such as NP-Completeness from computational complexity theory.

CS 6515. Introduction to Graduate Algorithms. 3 Credit Hours.
Design and analysis of algorithms on a graduate level, including dynamic programming, divide and conquer, FFT, graph and flow algorithms, RSA, linear programming, and NP-completeness.

CS 6520. Computational Complexity Theory. 3 Credit Hours.
Introduction to resource-bounded computations, central complexity-theoretic concepts such as complexity classes, reducibility, completeness, and intractability.

CS 6550. Design and Analysis of Algorithms. 3 Credit Hours.
Advanced techniques for designing and analyzing efficient algorithms for combinatorial, algebraic, and number-theoretic problems. Credit not allowed for both CS 6550 and CS 4540.

CS 6601. Artificial Intelligence. 3 Credit Hours.
Basic concepts and methods of artificial intelligence including both symbolic/conceptual and numerical/probabilistic techniques.

CS 6670. Distributed Control Algorithms. 3 Credit Hours.
Algorithms for synchronous, asynchronous, and partially synchronous networks; analysis, control, and implementation of distributed systems such as robot fleets, animal groups.

CS 6675. Advanced Internet Computing Systems and Applications. 3 Credit Hours.
Survey of basic Internet computing concepts and techniques used in Internet systems and applications, combined with in-depth study of fundamental principles underlying Internet computing. Credit not allowed for both CS 6675 and CS 4675.

CS 6705. Applications of Artificial Intelligence. 3 Credit Hours.
A study of the principles and practice of artificial intelligence in areas other than computer science, with particular focus on engineering, science, and business applications. Computer science majors cannot receive credit for this course.

CS 6725. Information Security Strategies and Policies. 3 Credit Hours.
Information security vulnerabilities and risks; legal, cost, privacy, and technology constraints; derivation of strategies; technical and procedural means of achieving desired ends.

CS 6726. Privacy, Technology, Policy, and Law. 3 Credit Hours.
This course takes a multi-disciplinary approach to privacy, a topic of great interest in the technology, policy, ethics, law, and business realms. Credit will not be awarded for both CS 6726 and CS 4726 or MGT 4726 or MGT 6726.

CS 6727. Cyber Security Practicum. 5 Credit Hours.
Capstone independent study project placing each student in a commercial, academic or government setting where he or she identifies a major cyber security problem, and explores and evaluates a solution that addresses it with realistic assumptions about the organizational context. The chose problem must be approved by course instructor. Cross-listed with ECE and PUBP 6727.

CS 6730. Data Visualization: Principles and Applications. 3 Credit Hours.
Introductory course on design principles and applications of data visualization. This course teaches best practices for visualizing datasets from diverse domains intended to help people make sense of data.

CS 6745. Information and Communication Technologies and Global Development. 3 Credit Hours.
Focus on technology design, adoption, and use as seen through the lens of global development.

CS 6750. Human-Computer Interaction. 3 Credit Hours.
Describes the characteristics of interaction between humans and computers and demonstrates techniques for the evaluation of user-centered systems. Crosslisted with PSYC 6750.

CS 6753. Human-Computer Interaction-Professional Preparation and Practice. 1 Credit Hour.
Preparation for a professional career in HCI. Speakers. Atlanta-area lab visits. Career trajectories. Project presentations. Technical, resume and interviewing skills. Atlanta-area HCI resources. Credit not allowed for both CS 6753 and PSYC 6753 or LCC 6753.

CS 6754. Engineering Data Base Management Systems. 3 Credit Hours.
Modeling and managing engineering information systems, integration of design and manufacturing functions in engineering product development, logical models of engineering product and processes. Credit not given for CS 6400 and CS 6754. Crosslisted with ME 6754.
CS 6755. Human-Computer Interaction Foundations. 3 Credit Hours.
Describes the theory and practice of designing effective and efficient interactions between people and technology. Students do not receive credit for both CS 6755 and PSYC 6755.

CS 6763. Design of Design Environments. 3 Credit Hours.
Analysis of design processes; analysis of current design tools at both the user interface and functional levels; procedures for developing better design tools. Credit not allowed for both CS 6763 and ID 6763 or COA 6763.

CS 6764. Geometric Modeling. 3 Credit Hours.
Software development course focusing on 3D geometric constructions and modeling; emphasizes solid modeling and its role in design. Crosslisted with COA 6764.

CS 6770. Mixed Reality Experience Design. 3 Credit Hours.
Introduction to the design of Mixed Reality experiences. Focuses on informal design, integration of media theory, HCI and technology issues. Significant group design projects.

CS 6780. Medical Image Processing. 3 Credit Hours.
A study of methods for enhancing, analyzing, interpreting, and visualizing information from two- and three-dimensional data obtained from a variety of medical image modalities. Crosslisted with ECE and BMED 6780.

CS 6795. Introduction to Cognitive Science. 3 Credit Hours.
Multidisciplinary perspectives on cognitive science. Interdisciplinary approaches to issues in cognition, including memory, language, problem solving, learning, perception, and action. Crosslisted with ISYE and PSYC 6795.

CS 6998. HCI Master’s Project. 1-9 Credit Hours.

CS 6999. Master’s Project. 1-9 Credit Hours.
Final project for students completing a master’s degree in the College of Computing. Repeatable for multi-semester projects.

CS 6XXX. Computer Sci Elective. 1-21 Credit Hours.

CS 7000. Master’s Thesis. 1-21 Credit Hours.

CS 7001. Overview of Graduate Studies in Computing. 5 Credit Hours.
Research tools including computer systems, as well as fundamental problem-solving skills, are introduced. Lectures on current computing research are presented and projects are required. Credit not allowed in a program of study for a graduate degree.

CS 7110. Parallel Computer Architectures. 3 Credit Hours.
Issues in the design, implementation, and programming of parallel machines. Credit not allowed for both CS 7110 and CS 4233.

CS 7210. Distributed Computing. 3 Credit Hours.
Fundamental concepts in distributed systems, including global states, logical clocks, and failure models. Distributed algorithms and their implementations using advanced distributed programming systems.

CS 7230. Systems Software Design, Implementation, and Evaluation. 3 Credit Hours.
Design, implementation, and evaluation of systems software. Distributed/parallel applications will be constructed and evaluated using the systems support that is developed.

CS 7250. Broadband Networking Systems. 3 Credit Hours.
Focus on the data link layer and its relationship to layers below and above. Gigabit Ethernet, SONTET, fibre channel; media including wireless, satellite, xDSL, cable.

CS 7260. Internetworking Architectures and Protocols. 3 Credit Hours.
Detailed discussion of the problems and solution techniques that arise in internetworking. Topics include routing, addressing, quality of service, and security.

CS 7270. Networked Applications and Services. 3 Credit Hours.
End-to-end functional building blocks and their use in adaptive and non-adaptive applications, including multimedia: coding, compression, security, directory services.

CS 7280. Network Science: Methods and Applications. 3 Credit Hours.
Characteristics of real networks in nature and technology, network measurement methods, network analysis, evolving networks, dynamic network processes, co-evolution of structure and function.

CS 7290. Advanced Topics in Microarchitecture and organization of high-performance processors. 3 Credit Hours.
Low-level organization and hardware algorithms for the implementation of modern high-performance microprocessors including concept designs and real-world case studies.

CS 7292. Reliability and Security in Computer Architecture. 3 Credit Hours.
Hardware support for process isolation, virtualization, debugging, and protection from side-channel attacks. Faults and failures, error tolerance, error rate budgeting, lifetime reliability of devices.

CS 7450. Information Visualization. 3 Credit Hours.
Study of computer visualization principles, techniques, and tools used for explaining and understanding symbolic, structured, and/or hierarchical information. Includes data and software visualization. Students cannot receive credit for both CS 7450 and CS 4460.

CS 7455. Issues in Human-Centered Computing. 3 Credit Hours.
In-depth focus on theoretical, methodological, conceptual, and technical issues across the HCC disciplines associated with humans (cognitive, biological, socio-cultural); design; ethics; and analysis and evaluation.

CS 7460. Collaborative Computing. 3 Credit Hours.
Introduction to computer-supported collaborative work, workflow automation, and meeting augmentation. The course deals with models, enabling technology, systems, and applications.

CS 7465. Educational Technology: Design and Evaluation. 3 Credit Hours.
Intensive project class in which students design, implement, and evaluate a piece of educational technology, applying the theory learned in Educational Technology: Conceptual Foundations.

CS 7467. Computer-Supported Collaborative Learning. 3 Credit Hours.
Computer-supported collaborative learning is the use of Internet-based technologies to support learning in social settings. Focus on issues of implementation and evaluation.

CS 7470. Mobile and Ubiquitous Computing. 3 Credit Hours.
Investigates the infrastructure required to develop mobile and ubiquitous computing applications and establishes major research themes and experimental practices.

CS 7476. Advanced Computer Vision. 3 Credit Hours.
Advanced topics in computer vision, which includes a deep dive into both the theoretical foundations of computer vision to the practical issues of building real systems that use computer vision. Credit will not be awarded for CS 7476 and CS 495.

CS 7490. Advanced Computer Graphics. 3 Credit Hours.
Advanced techniques in realistic image synthesis based on the physics of light. Anti-aliasing, textures, surface reflectance, distribution ray tracing, volume rendering, radiosity, and image-based rendering.
CS 7491. 3D Complexity Techniques for Graphics, Modeling, and Animation. 3 Credit Hours.
Multiresolution, compression, collision, morphing, visibility, and computational geometry techniques for accessing, rendering, and animating complex 3D models in engineering, scientific, business, or entertainment applications.

CS 7492. Simulation of Biological Systems. 3 Credit Hours.
Study different computer simulation methods for use in investigating biological systems, including bio-molecules, cells and full organisms.

CS 7495. Computer Vision. 3 Credit Hours.
An introduction to computer vision and machine perception. An intensive study of the process of generating a symbolic description of the scene by interpretation of images(s). Credit will not be awarded for both CS 7495 and CS 7476.

CS 7496. Computer Animation. 3 Credit Hours.
Motion techniques for computer animation and interactive games (keyframing, procedural methods, motion capture, and simulation) and principles for storytelling, composition, lighting, and interactivity.

CS 7497. Virtual Environments. 3 Credit Hours.
An introduction to virtual reality and virtual environments. Issues covered will include VR technology, software design, 3D human-computer interaction, and applications for VR.

CS 7499. 3D Reconstruction and Mapping in Computer Vision, Robotics, and Augmented Reality. 3 Credit Hours.
In this course we study the principles and algorithms underlying 3D Reconstruction and Mapping in Computer Vision, Robotics, and Augmented Reality.

CS 7510. Graph Algorithms. 3 Credit Hours.
Algorithms for graph problems such as maximum flow, matching, network reliability, minimum cuts, covering, coloring, planarity, shortest paths, and connectivity. Crosslisted with MATH 7510 and ISYE 7510.

CS 7520. Approximation Algorithms. 3 Credit Hours.
Approximation algorithms for NP-hard optimization problems, design and analysis techniques for such algorithms. Credit not allowed for both CS 7520 and CS 4520.

CS 7525. Algorithmic Game Theory and Economics. 3 Credit Hours.
Algorithmic aspects of game theory covering topics at the intersection of computer science, economics, and game theory with applications to domains such as internet.

CS 7530. Randomized Algorithms. 3 Credit Hours.
Techniques for designing and analyzing randomized algorithms, derandomization techniques. Credit not allowed for both CS 7530 and CS 4530.

CS 7535. Markov Chain Monte Carlo Algorithms. 3 Credit Hours.
This course studies Markov Chain Monte Carlo algorithms, widely-used in a variety of scientific fields, focusing on mathematical techniques for analyzing their convergence rates.

CS 7540. Spectral Algorithms and Representations. 3 Credit Hours.
Spectral methods mathematics and algorithmic insights driving applications with large data sets in domains such as web-search, information-retrieval, and medical diagnosis and prediction.

CS 7545. Theoretical Foundations of Machine Learning. 3 Credit Hours.
This course provides a basic arsenal of powerful mathematical tools for the analysis of learning algorithms, focusing on both statistical and computational aspects.

CS 7560. Theoretical Foundations of Cryptography. 3 Credit Hours.
One-way functions, pseudorandomness, public-key and identity-based cryptography, commitment and zero knowledge.

CS 7610. Modeling and Design. 3 Credit Hours.
Information-processing theories of modeling and design; topics include design decision making, problem solving and learning, and knowledge-based modeling and design.

CS 7611. AI Problem Solving. 3 Credit Hours.
Basic concepts and methods of AI problem solving, knowledge representation, reasoning, and learning.

CS 7612. Artificial Intelligence Planning. 3 Credit Hours.
Symbolic numerical techniques that allow intelligent systems to decide how they should act in order to achieve their goals, including action and plan representation, plan synthesis and reasoning, analysis of planning algorithms, plan execution and monitoring, plan reuse and learning, and applications.

CS 7613. Knowledge Systems Engineering. 3 Credit Hours.
Techniques for constructing large knowledge-based systems. Advanced symbolic AI techniques. Constraint systems.

CS 7615. Knowledge Agents. 3 Credit Hours.
Knowledge-based interactive systems, knowledge-based autonomous agents, agent architectures, learning and adaptation, agent evolution.

CS 7616. Pattern Recognition. 3 Credit Hours.
This course provides an introduction to the theory and practice of pattern recognition. It emphasizes unifying concepts and the analysis of real-world datasets.

CS 7620. Case-Based Reasoning. 3 Credit Hours.
Topics include case representation, indexing and retrieval, adaptation, interpretive CBR, the cognitive model that CBR implies, and its implications for creativity, decision aiding, and education. Credit not allowed for both CS 7620 and CS 4622.

CS 7626. Introduction to Behavioral Imaging. 3 Credit Hours.
An introduction to the use of sensor data and machine learning methods to measure and model human behavior objectively and automatically for health applications.

CS 7630. Autonomous Robotics. 3 Credit Hours.
The principles and practice of autonomous robotics including behavior-based design and architectures, adaptive learning and team behavior, and the role of perception within robotic systems.

CS 7631. Autonomous Multi-Robot Systems. 3 Credit Hours.
In-depth examination of the current research on multi-robot systems. Students develop and critically analyze a multi-robot system.

CS 7632. Game Artificial Intelligence. 3 Credit Hours.
An exploration of how artificial intelligence is used in modern digital computer games. Credit will not be awarded for CS 7632 and CS 4731, CS 7632 and LCC 4731 or CS 7632 and LMC 4731.

CS 7633. Human-Robot Interaction. 3 Credit Hours.
Survey of the state of the art in HRI research, introduction to statistical methods for HRI research, research project studio.

CS 7634. AI Storytelling in Virtual Worlds. 3 Credit Hours.
An exploration of how artificial intelligence can enable us to use stories in virtual worlds for the purpose of entertaining, educating, and training human users.
CS 7636. Computational Perception. 3 Credit Hours.
Study of statistical and algorithmic methods for sensing people using video and audio. Topics include face detection and recognition, figure tracking, and audio-visual sensing.

CS 7637. Knowledge-Based AI. 3 Credit Hours.
Structured knowledge representation; knowledge-based methods of reasoning and learning; problem-solving, modeling and design.

CS 7638. Artificial Intelligence Techniques for Robotics. 3 Credit Hours.
AI techniques with applications to autonomous vehicles. Extensive programming exercises. Topics include probabilistic inference, Kalman/particle filters, planning/search algorithms, PID control, SLAM.

CS 7639. Cyber Physical Design and Analysis. 3 Credit Hours.

CS 7640. Learning in Autonomous Agents. 3 Credit Hours.
An in-depth look at agents that learn, including intelligent systems, robots, and humans. Design and implementation of computer models of learning and adaptation in autonomous intelligent agents.

CS 7641. Machine Learning. 3 Credit Hours.
Machine learning techniques and applications. Topics include foundational issues; inductive, analytical, numerical, and theoretical approaches; and real-world applications.

CS 7642. Reinforcement Learning and Decision Making. 3 Credit Hours.
Efficient algorithms for multiagent planning, and approaches to learning near-optimal decisions using possibly partially observable Markov decision processes; stochastic and repeated games; and reinforcement learning.

CS 7643. Deep Learning. 3 Credit Hours.
This course will cover theory and practice of deep learning, including neural network and structured models, optimization algorithms, and applications to perception and Artificial Intelligence.

CS 7644. Machine Learning for Robotics. 3 Credit Hours.
Overview of a portfolio of machine learning techniques useful for robotic application: from regression to deep learning, applied on simulated real-time mobile robotic applications.

CS 7645. Numerical Machine Learning. 3 Credit Hours.
This course explores problems in classification/pattern recognition (OCR, speech, vision, fault detection, medical diagnosis), regression/function approximation, robot control, and reinforcement learning.

CS 7646. Machine Learning for Trading. 3 Credit Hours.
Introduces machine learning based trading strategies. Topics: Information processing, probabilistic analysis, portfolio construction, generation of market orders, KNN, random forests.

CS 7649. Robot Intelligence: Planning. 3 Credit Hours.
We investigate algorithms for robots and complex systems that make intelligent decisions. Emphasis on the theoretical and empirical properties of classical, geometric, stochastic/dynamic planning.

CS 7650. Natural Language. 3 Credit Hours.
Topics include lexical analysis, parsing, interpretation of sentences, semantic representation, organization of knowledge, inference mechanisms. Newer approaches combining statistical language processing and information retrieval techniques. Credit not allowed for both CS 7650 and CS 4650.

CS 7695. Philosophy of Cognition. 3 Credit Hours.
Examines problems in the foundations of cognition in relation to current issues in cognitive sciences. Topics include meaning, mental imagery, consciousness, and mind/body problem.

CS 7697. Cognitive Models of Science and Technology. 3 Credit Hours.
Examines how models of reasoning and representation developed in the cognitive sciences can provide a basis for an enriched understanding of scientific theories and research practices in science and technology.

CS 7741. Robotics Professional Preparation. 1 Credit Hour.

CS 7742. Robotics Professional Preparation 2. 1 Credit Hour.

CS 7743. Robotics Professional Preparation 3. 1 Credit Hour.

CS 7785. Introduction to Robotics Research. 3 Credit Hours.
Familiarizes students with the core areas of robotics; mechanics, control, perception, AI, and autonomy. Provides an introduction to the mathematical tools required in robotics research.

CS 7790. Cognitive Modeling. 4 Credit Hours.
A hands-on course covering a range of cognitive modeling methodologies. It explores the analysis, development, construction, and evaluation of models of cognitive processing. Crosslisted with ISYE and PSYC 7790.

CS 7799. Preparation for Doctoral Qualifying Exams. 1-21 Credit Hours.
Consent of the College required.

CS 8001. Seminar. 1 Credit Hour.
Group discussion of advanced topics in information and computer science. May not be used by computer science majors for degree credit.

CS 8002. Seminar. 2 Credit Hours.
Group discussion of advanced topics in information and computer science. May not be used by computer science majors for degree credit.

CS 8003. Seminar. 3 Credit Hours.
Group discussion of advanced topics in information and computer science. May not be used by computer science majors for degree credit.

CS 8004. Seminar. 4 Credit Hours.
Group discussion of advanced topics in information and computer science. May not be used by computer science majors for degree credit.

CS 8005. Seminar. 5 Credit Hours.
Group discussion of advanced topics in information and computer science. May not be used by computer science majors for degree credit.

CS 8006. Seminar. 6 Credit Hours.
Group discussion of advanced topics in information and computer science. May not be used by computer science majors for degree credit.

CS 8030. Software Engineering Seminar. 1 Credit Hour.
This seminar provides students with an opportunity to explore contemporary topics in software engineering.

CS 8740. Robotics Internship. 1-21 Credit Hours.
Graduate Internship at a partner company, GTRI or a GT Robotics lab.
CS 8741. Robotics Capstone Project. 3 Credit Hours.
Teams or individuals apply the knowledge and skills acquired throughout the MS program to a faculty supervised robotics project.

CS 8750. Robotics Research Foundation I. 3 Credit Hours.
Multidisciplinary research course supervised by two robotics faculty from different schools participating in the robotics Ph.D. program.

CS 8751. Robotics Research Foundation II. 3 Credit Hours.
Continuation of AE 8751 (Robotics Research Foundation I).

CS 8795. Colloquium in Cognitive Sciences. 1 Credit Hour.
Reading of research papers by leading cognitive scientists, attendance at their colloquia and meeting with them to discuss research. Crosslisted with ISYE and PSYC 8795.

CS 8801. Special Topics. 1 Credit Hour.
Special topics of current interest. Treatment of new developments in various areas of computing.

CS 8802. Special Topics. 2 Credit Hours.
Special topics of current interest. Treatment of new developments in various areas of computing.

CS 8803. Special Topics. 3 Credit Hours.
Special topics of current interest. Treatment of new developments in various areas of computing.

CS 8804. Special Topics. 4 Credit Hours.
Special topics of current interest. Treatment of new developments in various areas of computing.

CS 8805. Special Topics. 5 Credit Hours.
Special topics of current interest. Treatment of new developments in various areas of computing.

CS 8806. Special Topics. 6 Credit Hours.
Special topics of current interest. Treatment of new developments in various areas of computing.

CS 8811. Special Topics. 1 Credit Hour.
Special Topics in CS - Lab.

CS 8893. Special Topics in Cognitive Science. 3 Credit Hours.
Topics of current interest in cognitive science.

CS 8901. Special Problems. 1-21 Credit Hours.
Small-group or individual investigation of advanced topics in computing. Guided study and research.

CS 8902. Special Problems. 1-21 Credit Hours.
Small-group or individual investigation of advanced topics in computing. Guided study and research.

CS 8903. Special Problems. 1-21 Credit Hours.
Small-group or individual investigation of advanced topics in computing. Guided study and research.

CS 8997. Teaching Assistantship. 1-6 Credit Hours.
For graduate students holding graduate teaching assistantships.

CS 8998. Research Assistantship. 1-6 Credit Hours.
For graduate students holding graduate research assistantships.

CS 8999. Doctoral Thesis Preparation. 1-21 Credit Hours.

CS 9000. Doctoral Thesis. 1-21 Credit Hours.
